

CROPP COOPERATIVE

FLUID MILK

Because Organic Valley cows spend so much time in the great outdoors on pasture, the milk they produce is sweet, creamy and loaded with nutrition. Maybe that's why our milk wins so many awards. Organic Valley produces a wide variety of fluid milks to fit many needs. Our cows receive 56% of their dry matter intake from fresh pasture and dried forages, and spend an average of 191 days a year on pasture.

100% GRASSFED OPTIONS

In addition to being a leader in certified organic dairy, Organic Valley is pushing even further forward. We've partnered with other organic dairy leaders, including organic certifiers, to create the first full supply chain standard for 100% certified grassfed dairy. Ask us about this new certification built on the base of organic for 100% grass-fed milk.

- **WHOLE, FARM-DIRECT MILK**
- **STANDARDIZED MILK, FROM SKIM TO WHOLE BUTTERFAT LEVELS**
- **CONDENSED SKIM MILK**
- **CUSTOM BLENDS**
- **ULTRAFILTERED MILK**

Here's what makes our fluid milk organic:

- Organic Valley farms are certified organic by the USDA.
- Organic Valley farmers do not use antibiotics, synthetic hormones, toxic pesticides or GMOs.
- Organic animal feed cannot contain GMOs.
- USDA-certified organic products are eligible for export to Canada or the EU under an arranged Equivalency Arrangement. EU organic standards allow antibiotics for livestock, so any products derived from treated animals cannot be exported to the U.S. as organic.
- Organic Valley also certifies to China's National Organic Standards. Selected products are eligible for export to China as organic.

Ask us about other organic dairy export possibilities to serve your needs around the world.
